Office Action Summary	Examiner	Art Unit			
	Tan V. Mai	2193			
The MAILING DATE of this communication apperiod for Reply	opears on the cover sheet with the	correspondence address			
A SHORTENED STATUTORY PERIOD FOR REP THE MAILING DATE OF THIS COMMUNICATION  - Extensions of time may be available under the provisions of 37 CFR 1 after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a re  - If NO period for reply is specified above, the maximum statutory perior  - Failure to reply within the set or extended period for reply will, by statutory perior than three months after the mail earned patent term adjustment. See 37 CFR 1.704(b).		mely filed  ys will be considered timety.  n the mailing date of this communication.  ED (35 U.S.C. § 133).			
Status					
1)⊠ Responsive to communication(s) filed on 16	February 2005.				
2a) ☐ This action is <b>FINAL</b> . 2b) ☑ This action is non-final.					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
closed in accordance with the practice under	Ex parte Quayle, 1935 C.D. 11, 4	53 O.G. 213.			
Disposition of Claims					
4)⊠ Claim(s) <u>1-29</u> is/are pending in the applicatio	n.				
4a) Of the above claim(s) <u>22-27</u> is/are withdrawn from consideration.					
5) Claim(s) is/are allowed.					
6)⊠ Claim(s) <u>1-21,28 and 29</u> is/are rejected.					
7) Claim(s) is/are objected to.					
8) Claim(s) are subject to restriction and	or election requirement.				
Application Papers		•			
9)☐ The specification is objected to by the Examir	ner.				
10) The drawing(s) filed on is/are: a) □ ac	cepted or b) objected to by the	Examiner.			
Applicant may not request that any objection to the					
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).					
11) The oath or declaration is objected to by the E	Examiner. Note the attached Office	Action or form PTO-152.			
Priority under 35 U.S.C. § 119					
12) ☐ Acknowledgment is made of a claim for foreig a) ☐ All b) ☐ Some * c) ☐ None of:		)-(d) or (f).			
1. ☐ Certified copies of the priority documer					
2. Certified copies of the priority documents have been received in Application No

Application/Control Number: 10/004,064 Page 2

Art Unit: 2193

1. Applicant's election without traverse of Group I, Claims 1-21 and 28-29, in Paper

No. filed 2/16/05 is acknowledged.

2. Claims 8-21 and 28-29 are rejected under 35 U.S.C. 112, second paragraph, as

being indefinite for failing to particularly point out and distinctly claim the subject matter

which applicant regards as the invention.

As per dependent claim 8, the phrase "said user can by voice commands" seems

to be indefinite. Similarly noted claim 16

As per independent claim 9, the term "said housing containing internally all

components" (lines 3-4) is misdescriptive. It is unclear whether the term "all" refer to

the components recited in lines 1-3 or the component of a computer. Clarification is

requested.

As per dependent claim 21, the term "other suitable communication means" is

misdescriptive and undefined. It is noted that some NEW "communication means" may

NOT exist at the time application filed.

As per independent claim 28, the term "all" (line 1) is misdescriptive and

undefined. It is noted that some NEW "component" may NOT exist at the time

application filed. Similarly noted claim 29.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 2193

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-21 and 28-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newman et al '244 (applicants' admission Prior Art) in view of either PUBL # Hei 07-016388 (applicants' admission Prior Art), Pawate et al or Mark.

Newman et al disclose all the claimed features except (1) "control power" (claims 1 & 28-29, lines 6) and (2) "control and effect power" (claim 9, line 7) features.

However, these features are old and well known in the art for saving the power/battery.

For example, (1) PUBL # Hei 07-016388 discloses a "voice-recognition switch adapter capable of turning on/off various electric devices", (2) Pawate et al (col. 9, lines 49-65

"The AFEINT bit corresponds to the current condition of the AFE card interrupt signal. This signal is latched in the interface and controller circuit (180). Additionally, this signal is available to the DSP at the INT1-pin of the DSP. In order to minimize the power consumption of the smart card (100), the host computer may maintain the DSP at reset, for example, while in a smart mode, until an external event occurs, for example, a ring or a voice-activated switch. The host computer reads the AFEINT bit of the DSPCR to determine if the AFEINT bit has been set to one. If the AFEINT bit has been set to one, which indicates a pending interrupt from the AFE card, the host computer must ..."

and (3) Mark (col. 9, lines 25-49

"The AUD 2 further includes a micro-power amplifier 226 coupled to the output of the speaker 14. The amplifier 226 serves to provide a wake-up signal to the microprocessor 104 as described below. The amplifier 226 generates a signal in response to a signal generated by the speaker 114 in response to received acoustic signals. The signal output by the amplifier 226 causes the microprocessor 104 to become fully active from, a "sleep mode" that is automatically entered into after a long period of inactivity in order to conserve power. In an alternative embodiment, an input of the microprocessor 104 is coupled to a light sensor or other activation device such as a radio frequency sensor, which causes the microprocessor 104 to become fully active in response to an outside stimulus which may be provided by, e.g., a light or sound source associated, for example, with a telephone device. Thus, in accordance with such an embodiment, the AUD 2 can be made active by the excitation of a transducer or other sensor, by, e.g., a light, radio frequency signal or the receipt of an acoustic signal having a pre-defined frequency and

Art Unit: 2193

a minimum, pre-defined intensity level. These pre-defined levels or values are a matter of design choice and are programed into the ROM 106, preferably at the time of manufacture. The wake-up signal ensures that the AUD 2 is fully active when the user wants to gain access to a service"

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine either PUBL # Hei 07-016388, Pawate et al or Mark.Rault in Newman et al, thereby making the claimed invention, because the proposed device is a computer having "voice activated" feature for control / effect power as claimed. It is the preamble of claim 29 recites "laptop computer". The feature is insignificant.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan V. Mai whose telephone number is (571) 272-3726. The examiner can normally be reached on Mon-Wed and Fri. from 9:30am to 2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki, can be reached on (571) 272-3719. The fax phone number for the organization where this application or proceeding is assigned is:

Official (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-2100.

Tan V. Mai Primary Examiner
